

## **OSSINING PUBLIC LIBRARY**

**Ossining, New York**

F&A prepared environmental documentation under SEQRA for the construction of a new 45,000 square foot library on a site adjacent to the existing library which it has replaced. Issues addressed included traffic, stormwater management, site contamination, visual, historic/archaeological and community character impacts. The environmental review process was undertaken in anticipation of floating a \$15.8 million bond issue for the project. The bond was approved and the project has been completed. The new library was one of the first public LEED-Certified buildings in Westchester and the recipient of a Westchester Municipal Planning Federation award.
